

Cloud-Ready Business Continuity and Disaster Recovery

Secure, Accessible and Cost Effective Protection for the Botswana Business Environment

The DataCloud Advantage

Hypervisor-Based

Virtualisation offers simplicity and reduced operational costs over traditional physical replication solutions.

BC/DR Integration

Streamline workflows and management overhead with holistic continuity planning.

BINX Connectivity

Achieve incredible upload and download speeds via Local Access BINX connectivity over fibre or copper.

Multiple Data Centres

Choose from our Commerce Park or Phakalane locations to strengthen your DR Contingency Plan.

Reliability

Our centres are secured with RFID access control, CCTV, fire suppression, backup generators and online UPS Power.

Performance SLAs

Robust SLAs offer guaranteed levels of system uptime, security, data restoration, support, and disaster recovery services.

Simulated DR

Simulate a real life disaster recovery scenario to validate and verify the integrity of your backup plan.

Money Back Guarantee

100% of your monthly subscription refunded if we don't live up to our guarantees.

Professional Support

Industry proven technologists are at your service to ensure a smooth and robust experience.

Enterprise Class Continuity Planning

Safeguarding your organisation against natural disasters, political unrest, and malicious or accidental damage extends beyond having a simple backup system. Data Cloud's dynamic blend of Contingent Workarea, Virtualised Hosting, and Secure Private Cloud Backup offers you an enterprise-class solution to protect you from such potentially crippling circumstances. Pick your mix of services to ensure that essential functions remain available to customers, suppliers and regulators throughout a crisis period.

Contingent Workarea

Our secure facilities provide you with desk space, computer workstation, network connectivity, printing, phone and fax facilities to allow your key personnel to continue working during a crisis. Choose from our Commerce Park or Phakalane facilities to suit your location requirements, and opt for either shared or dedicated seating plans to fit your budget.

Virtualised Hosting

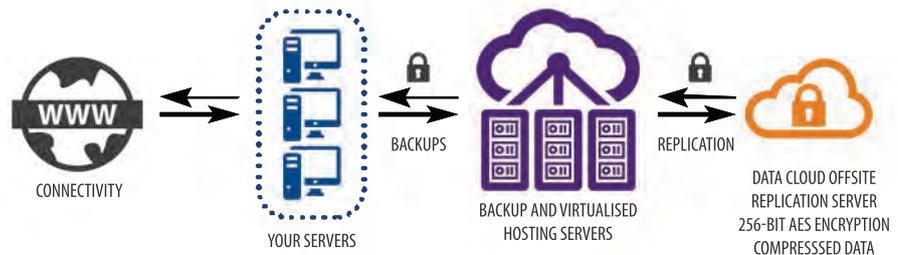

Our Hypervisor Based Disaster Recovery and Replication software offers simplicity and greatly reduced operational and maintenance cost over traditional physical replication solutions. Your server environment is deployed to a standby virtual host, and will go live with a DR activation.

Supported Operating Systems: Microsoft Windows Server (2003 / 2008 / 2012) or Linux (CentOS/Ubuntu)

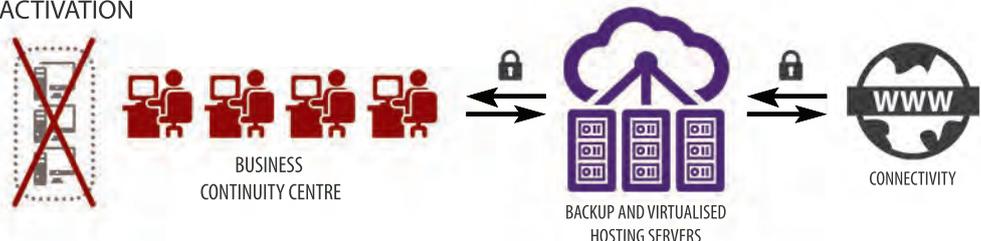

Recommended For: Exchange, SharePoint, Pastel, FTP, Web Applications, Databases

How It Works

INITIAL DEPLOYMENT

BC / DR ACTIVATION

Your server environment is provisioned on Data Cloud's Virtualised Hosting Servers, and Data Cloud's backup agent is configured to upload scheduled backups of your live data to the Primary Backup Server. Upon a BC/DR Activation, your key employees will occupy the BC seats and external users will be redirected to the virtualised replica of your server environment. Data from your most recent backup will be accessible from the replica server.

*A dedicated Data Cloud Local Access connection is recommended for optimum backup upload speeds.

Stay afloat during a crisis with a DataCloud Business Continuity Site

Our business continuity centres are situated in Commerce Park and Phakalane and are fully equipped to keep your operations running during a crisis period.

-  Fire Rated Server and Data Storage Room
-  Reception Area
-  Kitchenette
-  Open Plan Office with PCs, Scanners and Printers
-  Phone and Fax Facilities
-  Internet Access
-  Private Office
-  Male and Female Designated Toilets
-  Access Control
-  CCTV
-  Fire Detection & Supression Systems
-  Alarm Monitoring Systems

Consider an integrated Disaster Recovery and Business Continuity Plan for comprehensive protection from unplanned downtime.

Business Continuity is all about spreading risk and building contingencies. We highly recommend an integrated approach to this.

Having a solid DR plan that includes automated offsite backups AND contingent work space means your organisation is protected against unplanned crises.

This type of broad-thinking enables you to confidently conduct business without the stress of a fire-fighting mentality.

Data Cloud can assist your BC planning team by assessing risk in your organisation and recommending approaches to mitigating them.
